

Tekskil Prompter upgrade guide

Tekskil's 19RP LCD upgrade kit is an excellent way to provide station talent with a crisp, bright prompting display. The 19RP is an advanced multi-size monitor with high output solid-state backlights, twin cooling fans, and robust construction.

These are the highest quality displays available, complete with a seven year warranty – proudly made in North America.

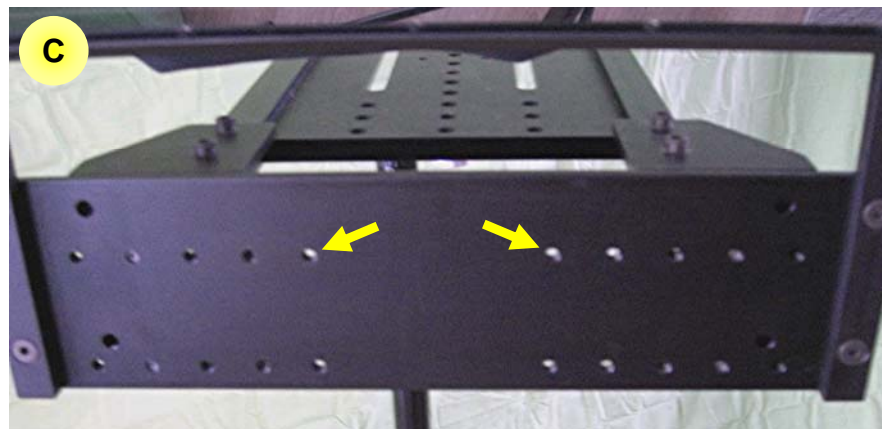

This 15" CRT replacement is used for example purposes – the 19RP has built-in mounting hardware to support the conversion of LCDs and CRTs for all major brands of prompters.

A Start by removing the old CRT. There are 2 thumbscrews to unscrew - they can be used to mount the new display.

B Remove both CRT support arms – these are fastened from the back with allen head screws.

C Use a 1/4" drill bit to clear the threads from the two top centermost holes in the backplate – these are the mounting holes for the new LCD display.

D Connect the new LCD to the backplate with thumbscrews or the supplied conversion hardware

Your new Tekskil display is set to go!
