

## Tekskil Prompter Upgrade Guide

Tekskil's 19" SelectVIEW replacement display is an excellent way to get rid of poor quality prompter monitors and give the station talent a prompt feed they'll be delighted with. The 19RP is an advanced multi-size monitor with high output solid-state backlights, twin cooling fans, and robust construction.

These are the highest quality displays available, complete with a three year warranty – proudly made in North America.

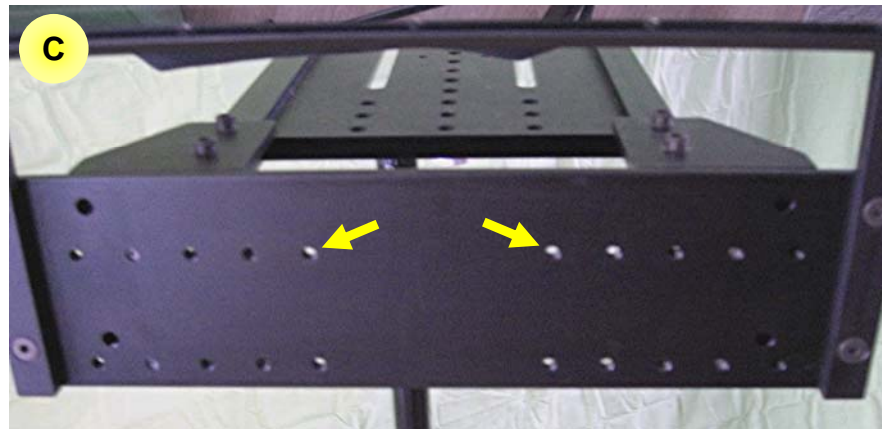

*This 15" CRT replacement is used as an example– the 19S has built-in mounting hardware to convert any LCD or CRT prompter head.*

**A** Start by removing the old CRT. There are 2 thumbscrews to unscrew - they can be used to mount the new display.

**B** Remove both CRT support arms – these are fastened from the back with allen head screws.

**C** Use a 1/4" drill bit to clear the threads from the two top centermost holes in the backplate – these are the mounting holes for the new LCD display.

**D** Mount the 19RP to the backplate with the button head screws or the 1/4-20 thumbscrews.

Your new Tekskil prompter is set to go!
