

Tekskil 17 inch Field/Jib Teleprompters

(PRELIMINARY)

Need a large Field or Jib Prompter for your Productions?

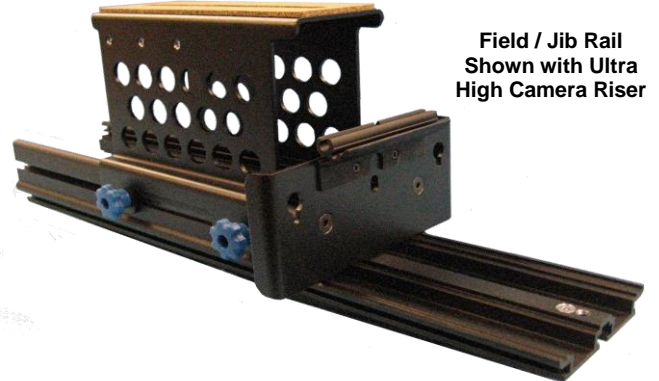

Tekskil's 17 inch LCD Prompter Monitors are the ultimate in rugged performance, guaranteed to perform under the most challenging conditions. Custom electronics and optics combine for enhanced readability – the highest rated prompting systems available. From the entry level **Value Series** which offers Tekskil's legendary quality display at an economical price, to the new **Premium Series** with its High Brightness LED backlit panels provide the ultimate in performance and readability in any lighting situation. They incorporate enhanced LCD panels (improved brightness and contrast), special optics, and are surrounded with rugged metal enclosures.

- Tekskil prompters are serious professional grade products and feature ultra-lightweight folded metal enclosures for maximum strength.
- Come complete with the latest technology high resolution displays having up to 1100 cd/m² (nits) of brightness and a 2000:1 contrast ratio
- Can be configured with a front mounted LED Tally light
- Optional Anton-Bauer Compact Battery Bracket supports industry standard batteries and provides up to four hours of continuous use.

As you can see, the beamsplitter support and prompter panel mount is located approximately one third back from the front of the rail. The Ultralight Prompter panel sits on top of the rail and attaches to the beamsplitter support. With the sliding captive nuts in the full length channel on the underside of the rail, the center of gravity can be moved forward of the beamsplitter and able to static balance perfectly with no counterweights. The camera becomes the counterweight.

More adjustment is available with the sliding camera riser, shown here with our R47 Ultra High Camera Riser for mini DV and small box cameras. Tekskil manufactures a complete line of camera risers to accommodate the largest EFP camera or the smallest mini-DV camcorder.

If AC Power is not available, Tekskil offers an Anton-Bauer QR Gold Compact Quick Release Battery Bracket that mounts to the rear of the Prompter Rail. A ProPak 13 or ProPak 14 will power the 17P for about 4 hours continuous duty and the 17V for even longer.
