

Tekskil Tally Displays

Is your talent effectively cued when they go on-air?

Tekskil offers three different tally displays to satisfy your tally requirements, no matter what camera or switcher tally protocol requires. From our basic LED array Program Tally to our more sophisticated TallyCAM® or FloorMANAGER® Tekskil offers exactly what you need at a price you can afford. And because Tekskil Tally Displays are hardwired, there is no photo sensor to fall off the camera at the most inopportune time.

The TA90 Tally Light is a three LED array mounted to the front of Tekskil's prompter monitor. Highly visible to the Talent immediately below the prompt text, this configuration provides instantaneous 'on-air' information. This is our most economical and popular single stage tally solution.

Current models of production and master control switchers provide dual stage tally - 'Next Up' (Preview Buss) and 'On-Air' (Program Buss) tally indicators. Tekskil's TallyCAM® expands the capability of dual mode tally with twin LED bar displays (Amber and Red) coupled with an easy to read Camera ID (selectable 1-19). All indicators are individually dimmable for the utmost in user control.

Is your talent aware of the time remaining for a spot? Do you have an easy way to communicate to your talent? Would visual program messaging benefit your studio?

Tekskil's TA40 FloorMANAGER® is a multi-function talent support system that provides the talent with critical information – Dual State Tally, Camera ID, Count-up / Count-down Timer, Clock, Floor Direction and adhoc messaging. With more and more stations moving to robotic camera systems, camera operators and floor directors aren't available to cue the talent. The TA40 provides the Production Manager an unprecedented level of flexibility to communicate to the talent on the studio floor.

The TA40 is a high brightness, high resolution letter-box display which mounts to the bottom of the prompter. The control room controls the TA40 over the studio network – real-time latency-free operation. Hundreds of canned messages can be selected on the fly and displayed instantly on the screen. Each display can be addressed individually – think of how powerful this device will be in your studio. Tekskil Apps are available to support control from a laptop, smart phone, tablet and can pull data from

any device on your Network. And because each TA40 has a unique address, every FloorMANAGER® can either be displaying different information as required or all ganged together displaying the same information.
